A check-list of Longicorn Beetles (Coleoptera, Cerambycoidea) of Europe.

Mikhail L. Danilevsky

A.N. Severtsov Institute, Leninsky pr. 33, 117071 Moscow, Russia

Summary. Complete list (based on publication by J. Althoff and M.L. Danilevsky, 1997) of European (from Portugal to Ural mountains) Vesperidae and Cerambycidae is given. Species introduced and established in Europe are also included. Nominative subgenera or subspecies are not mentioned, if other subgenera or subspecies do not occur in Europe. Each name of the species and subspecies is accompanied by the number of abbreviations indicates the names of the European countries (or territories) where the taxon inhabits. Main or important (but not all) synonyms, as well as taxonomic and geographical notes are also given. The list of used literature mostly includes contemporary publications.

For the East and South East border of Europe I accept Ural mountain ridge, Ural river, Kuma river and Manych valley. Caucasus (with Ciscaucasia), Cyprus and North Africa (with Canary Islands) are not treated. For the limits of North, Central and South parts of European Russia we use the divisions accepted in "A key of the Insects of European Part of the USSR" (see Plavilstshikov, 1965).

I would be extremely grateful to all colleagues for each remark, addition or correction.

I am very grateful to my colleagues who sent me a lot of remarks and corrections to the list:
